DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 to 16, drawn to a pump and motor having a motor control responsive to a motor condition, classified in class 417, subclass 44.1.
- II. Claims 17 to 32, drawn to a method of controlling a motor of a pump responsive to a motor condition, classified in class 417, subclass 53.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process as claimed can be practiced manually. That is, an unusual load of the motor can be observed visually by an rpm indicator, and the current/voltage to the motor can be controlled manually in response to the observed speed of the motor.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to Gregory L. Bradley on February 9, 2006 to request an oral election to the above restriction requirement, but the examiner was unable to reach Mr. Bradley.

Art Unit: 3746

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
